

The objective of Sustainability Week is to advance the GreenEconomy by creating platforms for African stakeholders from across sectors to share knowledge, thought leadership, and experience, and to learn from each other.

Sustainability Week is governed by the following 5 goals:

- Galvanising African countries to work together to drive sustainable development will not benefit Africa only, but offers pathways to solutions to the global 'polycrisis' of climate change, ecological collapse, and social inequality.
- Transitioning to a low carbon economy must be driven from all perspectives, but with development as a primary outcome.
- Creating good jobs is the key to success for South Africa and Africa, and leap-frogging to sophisticated (not necessarily high-tech) approaches is the key.
- Connecting industry with services sectors such as local government, energy, water, waste and transport is another key objective, with the outcome being to drive best practice and sustainable approaches to achieve both savings and competitive advantage.
- Going green requires innovation across all areas of endeavour – research, policy, standards, business models, technology, and methods, and therefore innovation transcends all engagements at Sustainability Week

24 June

- ACCSF
- ACCSF
- MAYORS DINNER

25 June

- Sustainable Cities Africa Conference 2019
- Sustainability in Mining
- Enabling a Sustainable Fourth Industrial Revolution
- Sustainable Infrastructure for Smart Cities
- Sustainable Water Resource
- Sustainable Transport and Mobility

26 June

- Vision Zero Waste
- Sustainable Agriculture and Food Security
- Sustainable Energy
- Youth and the Green EconomyCE

**CSIR INTERNATIONAL CONVENTION CENTRE
24-26 JUNE 2019**
